AI Use Statement

Claude.ai was used for brainstorming at the beginning of the project and for refining text at all stages of writing the report, and for help building the financial feasibility table. Claude was also used to help build the accompanying website — translating the group's report and infographic into HTML, CSS, and JavaScript.

All outputs were evaluated by the group for accuracy, bias, and relevance. Every claim and citation is connected to a source that was read and interpreted by the group, which takes full responsibility for the content. No original student material was entered without consent, and where AI-suggested grammar or other language revisions were made, the group maintained control over meaning and style.
